 Professional Winter Readiness Checklist | OFTEC Registered Engineers

Winter Preparation Guide

Prepare your oil heating system for winter with this comprehensive checklist from our experienced OFTEC registered engineers with over 20 years of field experience.

Essential Winter Preparation Steps

Monthly Checks (Before Winter Arrives)

- **Check oil tank level** - Ensure minimum 25% capacity before winter begins (prevents condensation and ensures emergency supply)
- **Inspect oil lines thoroughly** - Look for any leaks, damage, corrosion, or loose connections
- **Test complete heating system operation** - Run a full cycle to check functionality of all components
- **Check all radiator valves** - Bleed radiators if necessary for optimum heat distribution throughout your home
- **Inspect boiler exhaust flue** - Ensure clear airway, proper ventilation, and no obstructions
- **Verify thermostat operation** - Test temperature control accuracy and battery condition

Professional Service Required (Legal Compliance)

- **Annual boiler service and safety inspection** - Legal requirement for safety compliance and insurance validation
- **Oil pump pressure testing** - Ensures optimum fuel delivery, efficiency, and prevents costly breakdowns
- **Heat exchanger deep cleaning** - Removes deposits for maximum heat transfer and fuel efficiency
- **Combustion efficiency testing** - Optimises fuel consumption, reduces costs, and minimises emissions
- **Safety controls verification** - Critical for safe operation, legal compliance, and peace of mind

Critical Safety Notice: Never attempt to service or repair your oil boiler yourself. Always use OFTEC registered engineers for safety compliance and warranty protection. DIY repairs can be extremely dangerous and may void insurance coverage. Our engineers carry full insurance and certification.

Winter Emergency Support

Advanced Oil Boiler Services

24/7 Emergency Line: **07973 636886**

Our OFTEC registered engineers provide rapid emergency response throughout Hertfordshire, Buckinghamshire & Bedfordshire. We understand that heating failures don't wait for convenient times - that's why we're available around the clock with fully equipped emergency vehicles.
